

# How to disinfect physical impressions

01

## Wash the impression

Wearing gloves, wash the impression with water to remove any blood or bioburden saliva that may be remaining on the impression. Use a clean toothbrush to gently scrub the impression.

02

## Disinfectant spray

Place the impression on a clean towel. Spray disinfectant around the entire impression and into the undercuts of the impression.

03

## Sit and rinse

Let the impression sit for the recommended time period of the disinfectant. Rinse the impression using your hands.

04

## Send to lab

Package the impression in a wet paper towel and plastic bag. Wear gloves at all times while dealing with the impression. Send the impression to the laboratory.
